ABOUT US

In Romania, cancer in children is a harsh verdict, usually given without too many optimistic perspectives. Solutions are precarious and funds are insufficient!

Together, we are the #eHopeWarriors team, a group of people joined by the same purpose - that of making children's fight against this implacable disease possible and easier, bringing together people and entities open to provide assistance and support to this noble cause.

The eHope Warriors organization directs all its attention and resources towards the cases of children suffering with cancer. The main purpose is to allow, to the highest possible extent, for the possibility of an adequate treatment in specialized centres, both in Europe, and globally. How so? Through the launch of a unique collection of NFTs, created exclusively by hand, inspired by our family story.

2

THE IDEA

We are Doralin and Daniela, a young couple of photographers, and our project arose from the story of our fight against cancer. This was and still is a difficult chapter in our family's life, which we are crossing together with our little boy, Matti, aged 3, who is currently undergoing personalized treatment in a specialized paediatric oncology institute in Italy.

Over the past months, we have also received support by donations in cryptocurrency, which has made Matti's fight against the disease more accessible, and as the concept of a WEB3 space was already very familiar to us, the idea of exploring the utility of NFTs for charity purposes came naturally, particularly as we understand the potential behind the blockchain technology.

Being aware of the real and urgent needs of a small fighter, in order to have the most effective and concrete results in the battle against cancer, we took the necessary action to develop a platform, financing the specialty treatment needed by many children, using blockchain technology.

3

THE NEED

We would like to bring to the attention of eHope Warriors supporters - as well as others - the fact that, in addition to the fundamental and financial needs of the little ones in difficulty, such as: the cost of treatment, accommodation, and other expenses we want to support through the project, we also felt the need to present some useful information regarding the disturbing reality around the diagnoses of cancer developed by children in Romania over the past years.

According to the latest statistics, dated 2018, family doctors declared 569 new cancer cases in children aged between 0 and 19, having an incidence of 13.9% in this age segment, which represents 1.2% of the total new cases declared in Romania.

One of the most important aspects we would like to emphasize, along with the presented information, is that, in Romania, treatments for children with cancer are insufficient, and specialized centres are untrained and insufficiently equipped, which renders the battle against this illness even more difficult. That is why we want to cover part of the above-presented needs, and thus to help as many children as possible to fight for their right to life!

4

BENEFITS

The most important benefits of owning a unique piece from this NFT collection are, by far, the joy, satisfaction, and fulfilment of being a Hope Warrior, fighting by our side in this cause for the little ones, in a battle where the ultimate loot is life itself.

One of the main targets of the eHope Warriors team is the constant discovery and development of new partnerships which incur benefits to the fighters who joined our cause, by purchasing one or several NFTs from this collection.

For the same purpose, we invite members of our community - who can provide services or products under special or convenient conditions to HOPE Warriors holders - to contact us! Thus, we have at our forefront the development of a genuine army, which gives and receives help, through promotion, marketing, or any other type of support.

5

GOAL

With the aid of the eHope Warriors supporters and through the projects leading team, we would like to offer the little fighters, as well as their families, the chance to receive personalized treatments provided by the specialized clinics with very good results in paediatric oncology throughout Europe.

We will be an aggregator of valuable information: in the area of childrens cancer treatment, on specialized oncology institutes, on funding sources, database of translators, legal professionals, as well as people willing to help in various ways.

More over, we want to set a personal example, by financial, logistic, and information technology support, thus becoming a trustworthy guide for these difficult situations, full of unknown things, which the little cancer fighters go through.

To sum everything up: we want to build a bridge to leave behind us, which we crossed and which can make an easier pathway to be followed by those coming after us!

6

FUNDS

Using the funds and resources obtained from the sale of the collection, we will pursue the steps below:

**eHOPE
warriors**

6.1.

1. Fundraising platform - which will be a platform where various cases of children with cancer (with real needs, checked by the organization's team) can apply to be supported with crypto donations. We will encourage the creation of Maiar accounts and the integration of conversions into FIAT, with a payment processor. We ourselves will make the first donation, from the foundations funds. Also, the NFTs from our collection, purchased by the supporters of the project can be donated here, as an auction, as well as works donated by various artists.

- 2. Donation to the “Spitale Curate” Association (which made it possible and easy to identify the institute where Matti is provided adequate treatment).**
- 3. The Foundation Treasury: a large part of the funds will be administered by the project leadership team through the foundation we intend to establish for this purpose. The financial flow will go through staking agencies and pools on Maiar DEX, to the purpose of constantly generating income that can be directed towards the cases applying on the Fundraising platform or identified directly by the “Spitale Curate” Association or by the community.**

- 
- 4. Matti's Wallet - constituting a main source to continue the fight against the disease for the one who inspired the entire project - MATTI.**
 - 5. Marketing and partnership development with entities and other projects from the Elrond blockchain, to provide exposure and visibility in the online environment, on the social media and on other platforms.**
 - 6. Development - future collections of NFTs. We explore the idea of creating a HOPE token, a charity utility.**
 - 7. Rewarding the team. Although all the members of the team became engaged in the project without any financial claims, we consider it vital for those who diligently and constantly work for the little cancer fighters to be rewarded to a small extent.**

6.2.
